Taipei, Taiwan (UTC+8) · Open to remote

AI-native software engineer who ships generative AI products at scale and runs production systems where AI agents deliver safely through automated guardrails, verification, and rollback.

EXPERIENCE

Software Engineer — *CyberLink* 10/2024 – Present

- Delivered generative AI creative tools and SEO-driven product features for **MyEdit** and **MyEdit Business**, a GenAI image, video, and audio platform with **10M+ creators** and **~140K weekly users**.
- Initiated and led, with the QE team, an AI-assisted automated testing system for MyEdit, integrated into CI/CD and reducing project delivery from **6 months to 1 month**.
- Built automated BI pipelines over Google Analytics and external data sources, cutting reporting effort **86%**; insights are used weekly by Senior VPs, Directors, and Product Owners.
- Earned perfect cross-functional collaboration scores in **2 consecutive review cycles**, from 5+ peers across Product, Design, SEO, QA, and Engineering.

Research Assistant — *National Center for High-Performance Computing* 05/2023 – 02/2024

- Assessed emerging 5G/6G architectures and MEC frameworks for high-bandwidth, low-latency edge computing, including the technical feasibility of LEO satellite integration.

Software QA Intern — *MOXA* 07/2023 – 09/2023

- Built a Python test automation tool for cross-platform (x86/ARM) embedded systems, cutting manual test effort and widening validation coverage across OS environments.

SELECTED PROJECTS

Holly World — Costume Rental Platform *Independent project*

Codex · Claude Code · Next.js · TypeScript · PostgreSQL · Cloudflare Workers & R2 · GitHub Actions

- Built and operate a production rental catalog of **2,100+ items**, internationalized (i18n) across **5 languages**, owning everything from architecture to analytics.
- Engineered a production harness so AI agents ship safely as a one-person team: project rules, 7 CI validators, post-deploy smoke tests, verified promotion, and instant rollback (**1,100+ commits, ~300 PRs**).
- Ran AI-assisted SEO/AEO from GA4 and Search Console data (canonical fixes, structured data, answer-ready content); 28-day Google search clicks grew **12× (42 → 511)** and CTR **2.5% → 5.1%**.
- Kept the storefront online through database outages with cached reads and automatic fallback to static data, and served all media from a rate-limited Cloudflare edge gateway.

Adaptive Routing Optimization for SDN-based SRv6 Networks *Master's thesis research*

- Architected an adaptive SRv6 routing framework with probabilistic path selection, improving resilience under congestion and link failure. SDN · SRv6 · IPv6

SKILLS

AI Agent Engineering	Harness engineering for AI coding agents (Codex, Claude Code): rules, CI guardrails, automated verification, rollback; AI-assisted testing
Languages	TypeScript, JavaScript, Python, C, C++, Go
Web & Backend	React, Next.js, Node.js, PostgreSQL, REST APIs
Cloud & DevOps	Cloudflare Workers/R2, AWS, Docker, Linux, GitHub Actions, CI/CD
Testing & Analytics	Jest, Playwright, Google Analytics 4, GTM, SEO

EDUCATION

M.S. Information Management — *National Central University* 09/2022 – 07/2024

Coursework: Machine Learning, Deep Learning · Research: SDN, SRv6, traffic engineering, network resilience

B.S. Technology Application & HRD — *National Taiwan Normal University* 09/2018 – 07/2022

Languages: Mandarin (native), English (professional)
